

AUS DEM
INSTITUT FÜR ZOO- UND WILDTIERFORSCHUNG (IZW)
IM FORSCHUNGSVERBUND BERLIN E.V.

EINGEREICHT ÜBER DIE
PROFESSUR FÜR INTERDISZIPLINÄRE ZOO- UND WILDTIERFORSCHUNG
DES FACHBEREICHES VETERINÄRMEDIZIN DER
FREIEN UNIVERSITÄT BERLIN

**Population structure, movement and health
status of elephants and other wildlife in the
Selous-Niassa Wildlife Corridor,
southern Tanzania**

INAUGURAL-DISSERTATION

zur Erlangung des Grades eines

Doktors der Veterinärmedizin

an der Freien Universität Berlin

vorgelegt von

Donald Gregory Mpanduji

Tierarzt aus Sengerema-Mwanza, Tansania

Berlin 2004

Journal-Nr.: 2827

Gedruckt mit Genehmigung
des Fachbereichs Veterinärmedizin
der Freien Universität Berlin

Dekan:	Prof. Dr. L. Brunberg
Erster Gutachter:	Prof. Dr. Dr. H. Hofer
Zweiter Gutachter:	PD Dr. S. Dahms
Dritter Prüfer:	Prof. Dr. Weyrauch

Deskriptoren: migration corridor, satellite tracking, home range, habitat preference,
population structure, elephant, Selous-Niassa

Tag der Promotion: 21.10.2004

TABLE INDEX.....	III
FIGURE INDEX	V
ABBREVIATIONS	VII
1. INTRODUCTION	1
1.1 Overview of wildlife conservation	1
1.2 The Selous-Niassa Ecosystem	2
1.3 Conservation and development in the Selous-Niassa Wildlife Corridor.....	4
1.4 Research objectives	5
2. LITERATURE REVIEW.....	7
2.1 Overview of elephant population in the Selous.....	7
2.2 Corridor concept and definition.....	7
2.3 Corridor identifications and design	9
3. MATERIAL AND METHODS.....	11
3.1 Description of the study site	11
3.2 Public village meetings.....	13
3.3 Individual questionnaire-based interviews	13
3.4 Field observations	15
3.5 Field patrols by village game scouts.....	16
3.6 Crop damage, human and livestock injuries or death.....	16
3.7 Elephant immobilization and radio-collaring	17
3.7.1 Capture procedures	17
3.7.2 Delivery systems and immobilizing drugs	17
3.7.3 Monitoring of anaesthesia	18
3.7.4 Haematology and blood chemistry	19
3.8 Satellite-based radio-tracking of elephants.....	20
3.9 Data analysis.....	21
4. RESULTS	23
4.1 Status and distribution of wildlife.....	23
4.2 Status and distribution of elephants	25
4.3 Losses of crops: the role of wildlife	29
4.4 Attacks on humans and livestock by wildlife.....	33
4.5 Wildlife utilization and poaching	36
4.6 Immobilization and assessment of physical conditions in elephants.....	39
4.7 Major elephant movement routes	43
4.8 Seasonal elephant movements	47

4.9	Common food plants of elephants	50
4.10	Comparing the GPS and Argos satellite location data	52
4.11	Elephant home ranges.....	55
4.11.1	Cumulative home range characteristics.....	58
4.12	Elephant travelling distances	61
4.13	Habitat selection and utilization by elephants.....	62
5	DISCUSSION	67
5.1	Status and distribution of elephants.....	67
5.2	Surveying wildlife: comparing low tech and high tech approaches	68
5.3	Elephant capture, immobilization and assessment of physical status.....	71
5.4	Elephant home ranges and movements.....	73
5.5	Habitat use by and preference of elephants	76
5.6	Corridors and population persistence	77
5.7	People and wildlife	78
5.8	The future conservation status of the SNWC in southern Tanzania.....	80
6	SUMMARY	85
7	ZUSAMMENFASSUNG	91
8	REFERENCES.....	97
	APPENDIX: SCIENTIFIC NAMES OF WILDLIFE SPECIES.....	105
	APPENDIX: QUESTIONNAIRE.....	107
	ACKNOWLEDGEMENTS	111
	CURRICULUM VITAE.....	113

TABLE INDEX

Table 1: Details of villages in the study area where village public meetings, individual questionnaire surveys and field observations were conducted. Villages along the north of the Songea-Tunduru road belong to the northern section of the Selous Niassa Wildlife Corridor (SNWC), villages south of the road to the southern section of SNWC.....	15
Table 2: Estimates of dosage for immobilization of elephants. (Etorphine was available at a concentration of 9.8mg/ml, and Azaperone at a concentration of 40 mg/ml).	18
Table 3: Status and distribution of wildlife species as assessed by village group discussions, individual questionnaire-based interviews and aerial censuses during the wet and dry season 2000.....	24
Table 4: Village areas where field observations for elephant signs were carried out, including “encounter densities” for each area.	28
Table 5: Crop raiding wildlife species, damaged growth stages, type of damage and expected losses.	30
Table 6: Report of the crop “damaged” by larger wild animal species in Songea Rural (Namtumbo) District from 1990 to 2000.....	32
Table 7: Total area of mixed crops cultivated and the total damage caused by weeds, diseases, “small pest species” (rodents, birds), elephants and other large mammals in Songea Rural (Namtumbo) District as reported by the District Agriculture Office.....	34
Table 8: Monthly distribution of the number of livestock killed by wild animals in Songea Rural (Namtumbo) District for the period from 1990 to 2000.	35
Table 9: Signs of poaching activities observed during field observations in different village lands.....	38
Table 10: Date, time, location, sex, type of drug, dose and posture of elephants immobilized in different areas of the Selous-Niassa wildlife corridor in southern Tanzania.....	40
Table 11: The shoulder height, sex and age group definition from eleven elephants darted in the Selous-Niassa wildlife corridor in southern Tanzania.....	41
Table 12: Immobilization, haematology and blood chemistry values in elephants from different areas of the Selous–Niassa Wildlife Corridor in southern Tanzania.....	42
Table 13: Major river systems in the centre of the Selous-Niassa Wildlife Corridor associated with elephant presence.	51
Table 14: Trees, shrubs and grass species eaten by elephants as food in the Selous-Niassa Wildlife Corridor as reported by local people	53
Table 15: The characteristic of the GPS and ARGOS Satellite data acquired from the second generation Telonic radio-collars used on 10 elephants in the SNWC from 2000-2002.....	54
Table 16: Comparison between the number of position fixes and the mean monthly home range between the Argos and GPS system from months where both data were available for the elephants radio-collared in the Selous-Niassa wildlife corridor, southern Tanzania.....	55
Table 17: Home range sizes of radio-tracked elephants in the Selous-Niassa Wildlife Corridor, as calculated with the minimum convex polygon, kernel and Jennrich-Turner methods.....	56
Table 18: Percentage of the total home range overlap of each radio-collared elephant with all other radio-collared elephants from the Selous-Niassa wildlife.....	59

Table 19: Total distance travelled, maximum and average distance moved between successive tracking locations for elephants radio-collared in different areas of the Selous-Niassa wildlife corridor.	61
Table 20: Seasonal habitat preference of elephants in the Selous-Niassa wildlife corridor in southern Tanzania between December 2000 and September 2002.	65
Table 21: Changes in habitat preference of elephants in the Selous-Niassa wildlife corridor in southern Tanzania between the wet and dry season.	66
Table 22: Home range sizes of African elephants	75

FIGURE INDEX

Figure 1: The Selous-Niassa ecosystem.....	3
Figure 2: The distribution of villages and roads in relation to the protected areas in and around the Selous-Niassa Wildlife Corridor in Tanzania and Mozambique. BZ: buffer zones around Selous are separate from the Game Reserve, around Niassa are part of the Game Reserve.....	12
Figure 3: Mean elephant calf: female ratios in six different survey areas of the Selous-Niassa Wildlife Corridor	26
Figure 4: Sizes of different age-sex classes in elephant groups in five different survey areas in the northern and central section of the Selous-Niassa Wildlife Corridor averaged over 5 years between 1997 and 2001. Adm-Adult male, Adf-Adult female.....	27
Figure 5: Sizes of different age-sex classes in elephant groups averaged across five different survey areas in the northern and central section of the Selous-Niassa Wildlife Corridor between 1997 and 2001. Adm-Adult male, Adf-Adult female.....	27
Figure 6: The relative frequency with which wildlife species were mentioned as being involved in crop raiding activities (n = 87).	29
Figure 7: Shows the relationship between monthly crop damage by larger mammals and average rainfall pattern in Songea Rural District from 1990 to 2000.	32
Figure 8: Bundles of snares collected from a single snare line by Game Assistant, Ally Msusa during fieldwork, in the southern section of the Selous Niassa Wildlife Corridor.	37
Figure 9: A trunk of a bull traumatized by snare on the southern section of the Selous-Niassa Wildlife Corridor. The wound was cleaned and treated by Oxytetracycline spray	37
Figure 10: The major elephant movement routes in the Selous-Niassa Wildlife Corridor in southern Tanzania, in relation to the location of roads, villages and local protected areas. Arrows indicate likely continuation of known route, but do not imply direction of movements by elephants. BZ: bufferzones around Selous are separate from the Game Reserve, around Niassa are part of the Game Reserves.	43
Figure 11: Tree diagram showing the Malimbani elephant route	45
Figure 12: Tree diagram showing the Nampungu ya Chakame elephant route.....	46
Figure 13: Tree diagram showing the Ritungula elephant route.....	48
Figure 14: Tree diagram showing the Sasawala-Lukumbule elephant route.....	49
Figure 15: Home ranges of nine radio-tracked elephants in relation to the locations of major elephant movement routes, villages and protected area boundaries in the Selous-Niassa Wildlife Corridor. BZ: bufferzones around Selous are separate from the Game Reserve, around Niassa are part of the Game Reserves.....	57
Figure 16: Cumulative observation area curve, illustrating the relationship between home range size and period of observation for six bull elephants radio-collared in the southern section of the Selous-Niassa Wildlife Corridor, Southern Tanzania.	60
Figure 17: Cumulative observation area curves illustrating the relationship between home range size and period of observation in two elephants radio-collared in the northern section of the Selous-Niassa Wildlife Corridor, Southern Tanzania	60
Figure 18: Tracking locations of three radio-collared elephants in the northern section of the Selous-Niassa Wildlife Corridor (Arrow on the small map insert).....	62
Figure 19: Tracking locations of three radio-collared elephants in the central section of the Selous-Niassa Wildlife Corridor (Arrow on the small map insert)	63

Figure 20: Tracking locations of three radio-collared elephants in the central and southern section of the Selous-Niassa Wildlife Corridor (Arrows on the small map insert) 64

Figure 21: One of the signboards showing where the SNWC (Malimbani Route) Crosses the Songea-Tunduru main road between Mchomoro and Kilimasera in Songea Rural District (Namtumbo). Four such signs have been placed in places identified as important elephant crossing areas along the main road to alert people not to carry out activities that will prevent elephant movements. 82

ABBREVIATIONS

AP	Alkaline Phosphatase
ALT	Alanine AminoTransferase
AST	Aspartate Amino Transferase
CBC	Community Based Conservation
DRDP	District Rural Development Programme
EDTA	Ethylene Diamine Tetraacetic Acid
GIS	Geographical Information System
GPS	Global Position System
GTZ	German Agency for Technical Cooperation
Hb	Haemoglobin
IZW	Institute for Zoo and Wildlife Research, Berlin, Germany
MCP	Minimum Convex Polygon (to determine a home range)
NAF	Sodium Flouride
NGR	Niassa Game Reserve
PCV	Packed Cell Volume
RBC	Red Blood Cells
SCP	Selous Conservation Programme
SGR	Selous Game Reserve
SNWC	Selous-Niassa Wildlife Corridor
SODA	Songea Development Action (predecessor of Songea DRDP)
SUA	Sokoine University of Agriculture, Morogoro, Tanzania
TAWIRI	Tanzania Wildlife Research Institute, Arusha, Tanzania
VEO	Village Executive Officer
VGS	Village Game Scout
WBC	White Blood Cells
WMA	Wildlife Management Area (on village land)
