

Contents

Summary	iv
Zusammenfassung	v
1 Quantum Computing with Electron Spins	1
1.1 Quantum Computing – a short review	1
1.1.1 DiVincenzo criteria	2
1.1.2 Implementations.....	4
1.2 Quantum Computing with spins.....	6
1.2.1 Liquid NMR.....	8
1.2.2 Pseudo–pure states and scalability.....	11
1.2.3 Kane's proposal.....	12
1.3 Endohedral fullerenes for Quantum Computing.....	14
1.3.1 Gated concept.....	14
1.3.2 The first milestone – Quantum Cellular Automaton.....	16
2 Group V endohedral fullerenes	19
2.1 Production.....	19
2.1.1 Ion implantation.....	20
2.1.2 Characterisation and enrichment	20
2.2 Phosphorous in C ₆₀	21
2.3 N@C ₆₀ and P@C ₆₀ as Qubits.....	26
2.3.1 Coupling.....	26
2.3.2 Decoherence.....	28
2.4 Conclusions	29
3 Relaxation	31
3.1 Experimental details.....	31
3.2 Spin – lattice relaxation.....	32

3.3 Spin – spin relaxation.....	40
3.4 Conclusions	41
4 Qubit Rotations and Spin Nutations.....	45
4.1 Experimental details.....	45
4.2 Nutation and Selectivity.....	47
4.3 Nutation of P@C ₆₀ (solution).....	50
4.4 Nutation of P@C ₆₀ (powder).....	51
4.5 Conclusions	58
5 Towards a Fullerene Quantum Computer.....	61
5.1 A Fullerene–based Quantum Cellular Automaton.....	61
5.2 Alignment of N@C ₆₀ and N@C ₇₀ in a Liquid–Crystal Matrix.....	66
5.3 Towards a two Qubit System.....	72
5.4 Conclusions	74
6 Conclusions and Perspectives	77
6.1 Conclusions	77
6.2 Perspectives.....	79
7 References.....	81
7.1 References in chapter 1	81
7.2 References in chapter 2	84
7.3 References in chapter 3	85
7.4 References in chapter 4	86
7.5 References in chapter 5	86
7.6 References in chapter 6	87

Appendix

A N@PCBM	89
Publications	91
