Structure-function analysis of the STAT1 N-domain

Dissertation

zur Erlangung des akademischen Grades des
Doktors der Naturwissenschaften
(Dr. rer. nat.)

eingereicht im
Fachbereich Biologie, Chemie und Pharmazie
der Freien Universität Berlin

vorgelegt von
Torsten Meißner
aus Bonn

Berlin, April 2005

Die vorliegende Arbeit habe ich von Januar 2001 bis April 2005 in der Nachwuchsgruppe Zelluläre Signalverarbeitung, unter Anleitung von Dr. Uwe Vinkemeier, am Forschungsinstitut für Molekulare Pharmakologie (FMP) in Berlin-Buch durchgeführt.

1. Gutachter: Prof. Dr. Wolfram Saenger
2. Gutachter: Prof. Dr. Thomas Meyer

Datum der Abgabe: 19.04.2005
Datum der Disputation: 22.07.2005

TABLE OF CONTENTS

I. INTRODCTION 1

1.1 CYTOKINES AND INTERFERONS 1
1.2 THE JAK-STAT PATHWAY 2
1.3 STAT PROTEINS 4
1.4 THE STAT N-DOMAIN 5
1.4.1 Structure of the STAT N-domain 5
1.4.2 Functions of the STAT N-domain 7
1.4.3 Arginine methylation of STAT1 9
1.5 RATJADONE A – A PUTATIVE NUCLEAR EXPORT INHIBITOR 11
Aim of the thesis 13

II. MATERIALS AND METHODS 14

2.1 MATERIALS 14
2.1.1 Chemicals 14
2.1.2 Enzymes and reaction kits 14
2.1.3 Plasmids and constructs 15
2.1.4 Primers and oligonucleotides 16
2.1.5 Bacterial strains and media 18
2.1.6 Cell lines and cell culture reagents 19
2.1.7 Antibodies 19
2.1.8 Affinity matrices 21
2.1.9 Peptides 21
2.1.10 Buffers and solutions 21
2.1.11 Software 21
2.2.METHODS 22
2.2.1 Molecular cloning techniques 22
2.2.1.1 Polymerase chain reaction (PCR) 22
2.2.1.2 Restriction digestion of DNA 22
2.2.1.3 DNA gel electrophoresis 22
2.2.1.4 Ligation 23
2.2.1.5 Preparation of competent bacteria 23
2.2.1.6 Transformation of bacteria 23
2.2.1.7 Isolation of plasmid DNA from bacteria 24
2.2.1.8 DNA sequencing 25
2.2.1.9 Site-directed mutagenesis 25
2.2.1.10 Plasmid construction 25
2.2.2 Cell culture techniques 28
2.2.2.1 Cultivation of mammalian cells 28
2.2.2.2 Transfection and generation of stable cell lines 29
2.2.2.3 Treatment of cells 29
2.2.3 Microinjections 30
2.2.4 Immunocytochemistry and fluorescence analysis 30
2.2.5 Cell extraction 31
2.2.6 SDS-Polyacrylamide gel electrophoresis (SDS-PAGE) 32
2.2.7 Immunoblot analysis (Western blot) 33
2.2.8 Coomassie staining 34
2.2.9 Silver staining 34
2.2.10 Electrophoretic mobility shift assay (EMSA) 34
2.2.11 Reverse transcriptase PCR (RT-PCR) 36

2.2.12 Reporter gene assay 37
2.2.13 *In vivo* labelling and fluorography 38
2.2.14 Protein expression and purification 39
2.2.15 Importin-α5 interaction assay 40
2.2.16 Mass spectrometric analysis 41

III. RESULTS 44

3.1 FUNCTIONAL ANALYSIS OF THE STAT1 N-DOMAIN 44
3.1.1 The N-domain is required for nuclear accumulation of STAT1 following cytokine stimulation 44
3.1.2 The STAT1 N-domain does not contain an autonomous, transferable NLS 45
3.1.3 The N-domain is required for STAT1 binding to importin-α5 49
3.1.4 Multiple mutations within the N-domain preclude STAT1 nuclear accumulation 50
3.1.5 N-terminal mutants of STAT1 display impaired dephosphorylation and protein degradation 52
3.1.6 Stabilisation of the $R^{31}A$ mutant does not rescue its functional defects 56
3.1.7 The $R^{31}A$ mutant does not promote reporter gene transcription in STAT1-deficient cells 57
3.1.8 Mass spectrometry and fluorography both fail to provide evidence for the methylation of STAT1 58
3.1.9 Methylthioadenosine affects gene transcription in an unspecific and STAT1-independent manner 63
3.1.10 MTAP expression does not improve the interferon response of MCF-7 cells 69
3.2 CHARACTERISATION OF RATJADONE A – A NEW INHIBITOR OF CRM1-DEPENDENT NUCLEAR PROTEIN EXPORT 72
3.2.1 Ratjadone A inhibits CRM1-mediated nuclear protein export 72
3.2.2 Use of ratjadone A to study protein nuclear export 76
3.2.3 CRM1-mediated export contributes to the nucleocytoplasmic distribution of STATs in resting cells 78

IV. DISCUSSION 81

4.1 ROLE OF THE STAT1 N-DOMAIN IN NUCLEAR IMPORT AND DEPHOSPHORYLATION 81
4.2 ARGININE METHYLATION OF STAT1 DOES NOT DETERMINE THE INTERFERON INSENSITVITY OF TUMOR CELLS 85
4.3 RATJADONE A - A NEW TOOL TO STUDY CRM1-DEPENDENT NUCLEAR PROTEIN EXPORT 90
4.4 CONTRIBUTION OF CRM1-MEDIATED EXPORT TO THE NUCLEOCYTOPLASMIC DISTRIBUTION OF STATS IN RESTING CELLS 94

V. SUMMARY 98
