**Functional analysis of membrane properties
in identified insect neurons:
The roles of ionic currents for intracellular calcium
signaling, intrinsic excitability and dendritic growth**

Dissertation zur Erlangung des akademischen Grades des
Doktors der Naturwissenschaften (Dr. rer. nat.)

Eingereicht im Fachbereich Biologie, Chemie, Pharmazie
der Freien Universität Berlin

vorgelegt von

Stefanie Ryglewski

aus Berlin

Januar 2008

1. Gutachter: Prof. Dr. Hans-Joachim Pflüger
2. Gutachter: Prof. Dr. Carsten Duch

Disputation am 5. März 2008

PUBLICATIONS

Published:

Ryglewski S, Pflueger HJ, Duch C (2007) Expanding the Neuron's Calcium Signaling Repertoire: Intracellular Calcium Release via Voltage induced PLC and IP3R Activation. PLoS

Biol 5(4):e66.

In preparation:

VonHoff F, Ryglewski S, Duch C (2008) Dendrite elongation and dendritic branching are separately affected by different forms of intrinsic motoneuron excitability

Ryglewski S, Duch C (2008) Potassium membrane currents of an identified *Drosophila* motoneuron *in situ*

Abstracts

Ryglewski S, Pflueger HJ, Duch C (2006) Calcium induced ionic currents in insect neuromodulatory neurons. Soc Neurosci Abs 253.20/W21

SPONSORED RESEARCH

PhD student in the laboratory of Dr. HJ Pflüger, Free University of Berlin, sponsored by the DFG 08/2004-10/2006

PhD stipend in the Graduate College 837 'Functional Insect Science' 10/2006-12/2007

PRESENTATIONS

Poster

38th annual meeting of the Society for Neuroscience, "The role of potassium and calcium currents for the excitability, structure and function of an identified *Drosophila* motoneuron", San Diego, November 2007

37th annual meeting of the Society for Neuroscience, "Calcium induced currents in insect neuromodulatory neurons", Atlanta, October 2006

Ryglewski S, Pflüger HJ, Duch C

30th Goettingen Neurobiology Conference, "GABA receptor activation and induced ionic currents of locust metathoracic DUM neurons", February 2005

Ryglewski S, Heidel E, Pflüger HJ

Talk

German Arthropod Seminar 2004, "GABA induced ionic currents in locust DUM neurons", Daun, September 2004

Acknowledgements

C Duch is greatly acknowledged for support during the course of all experiments presented in this thesis. Many thanks for all the fruitful discussions, the encouraging words when nothing seemed to work.

HJ Pflüger is also greatly acknowledged for all the provided support.

F Vonhoff: Without his work on the third manuscript it would not have come to an end until now.

RB Levine is greatly acknowledged for the discussions about my patch-clamp experiments and for encouraging me to publish the data acquired with the different electrophysiological devices I used.

J Worrel: Thank you for the many conversations we had in Tucson. I enjoyed them very much.

Ricardo Vierk, Maurice Meseke, Jana Börner, Bettina Stocker who are great colleagues. We always spent a few minutes during lunch time. We spent more time than with our families.

Thanks to Heike Wolfenber, our technician. She was never tired to make all these different solutions I needed for doing my recordings.

Thanks to my family, especially during the last few weeks before my thesis was accomplished. Thank you for your patience when I locked myself in our study and for making tea.

Einar Heidel who died in a tragic accident two years ago. Thank you so much for teaching me all these electrophysiological skills.

and

One thousand kisses and hugs for my dear friend Doreen Johannes who supported me during the last few years. She is a great friend of mine, and I hope we will enjoy many years together from now. And not to forget – thank you for all these great locusts.
