

## Abkürzungsverzeichnis

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| ACE       | angiotensine converting enzyme                                   |
| ADAM-TS-1 | a disintegrein and metalloproteinase with thrombospondine motifs |
| Ang1      | Angiopoietin-1                                                   |
| Ang2      | Angiopoietin-2                                                   |
| AP-1      | nuclear factor activator protein-1                               |
| APS       | Ammoniumperoxydisulfat                                           |
| BAEC      | bovine arterial endothelial cells                                |
| bFGF      | b fibroblast growth factor                                       |
| bp        | Basenpaar                                                        |
| cam       | cell-adhesion-molecule                                           |
| cDNA      | complementary DNA                                                |
| CMT       | Charcot-Marie-Tooth Erkrankung                                   |
| CNP       | C-type natriuretic peptide                                       |
| COX       | cyclooxygenase                                                   |
| CRE       | cAMP Response Element                                            |
| DD        | differential display                                             |
| DEPC      | Diethylcyanophosphonat                                           |
| DEPP      | Decidual protein induced by progesterone                         |
| dNTP      | Deoxynucleotid                                                   |
| DSS       | Dejerine-Sottas Syndrom                                          |
| DTT       | Dithiotreitol                                                    |
| EAPI      | Epididymical Apical Protein                                      |
| ecNOS     | endothelial cell NO-Synthase                                     |
| EDRP      | endothelium derived relaxing peptide                             |
| EDTA      | Ethyldiamintetraessigsäure                                       |
| EGFR      | Epidermal Growth Factor                                          |
| Egr-1     | early growth response-1                                          |
| ERK-1     | extracellular-related-kinase 1                                   |
| ERK-2     | extracellular-related-kinase 2                                   |
| ET-1      | Endothelin-1                                                     |
| FGF-2     | fibroblast growth factor-2                                       |
| GAP-DH    | Glyceraldehydphosphat-Dehydrogenase                              |
| gas-3     | growth-arrest-specific-protein-3                                 |
| GPC3      | glypican-3                                                       |
| HB-EGF    | Heparin-binding epidermal growth factor-like growth factor       |
| HNPP      | hereditary neuropathy with liability to pressure palsies         |
| HP        | Hin-Primer                                                       |
| HSS       | Hanks' Salt Solution                                             |
| HUVEC     | human umbilical vascular endothelial cells                       |
| ICAM-1    | intercellular adhesin molecule                                   |
| IERG      | immediate early response gene                                    |

|                |                                                          |
|----------------|----------------------------------------------------------|
| JNK-2          | c-Jun-NH <sub>2</sub> -terminal-kinase-2                 |
| LPA            | lineares Polyacrylamid                                   |
| LSS            | laminar shear stress                                     |
| MAPK-1         | mitogen-activated-protein-kinase-1                       |
| MCP-1          | monocyte chemotactic protein-1                           |
| MDC 15         | metalloproteinase-like disintegrin-like cysteine rich 15 |
| METH-1         | metalloprotease with thromospondine motifs-1             |
| MMP-9          | matrix metalloprotease-9                                 |
| Mn-SO          | manganese superoxide dismutase                           |
| MS2            | macrophage surface protein-2                             |
| NF $\kappa$ B  | nuclear factor $\kappa$ B                                |
| NOS            | NO-Synthase                                              |
| OD             | optical density                                          |
| PA             | Gewebsplasminogenaktivator                               |
| PAEC           | porcine arterial endothelial cells                       |
| PBS            | Phosphat Saline Puffer                                   |
| PCR            | polymerase chain reaction                                |
| PDGF           | platelet derived growth factor                           |
| PKC            | Protein kinase C                                         |
| PMP-22         | peripheral myelin protein 22                             |
| PS             | Phosphatidylserin                                        |
| RAAS           | Renin-Angiotensin I-Angiotensin II-System                |
| RP             | Rück-Primer                                              |
| RT             | reverse transcription                                    |
| RT-PCR         | reverse transcription-PCR                                |
| SDS            | Sodiumdodecylsulfat                                      |
| SRE            | serum response-Element                                   |
| SSC            | Saline-sodium citrate buffer                             |
| SSRE           | shear stress response element                            |
| TBE            | Tris-Borsäure-EDTA                                       |
| TEMED          | Tetramethylethylenediamin                                |
| TF             | tissue factor                                            |
| TGF- $\beta$ 1 | transforming growth factor- $\beta$ 1                    |
| TRE            | tumor promoting response element                         |
| TSP            | Thrombospondin                                           |
| TSS            | turbulent shear stress                                   |
| tPA            | tissue plasminogen activator                             |
| VCAM-1         | vascular cell adhesion molecule                          |
| VEGF           | Vascular endothelial growth factor                       |
| VEGF-R1        | VEGF-Rezeptor 1                                          |
| VEGF-R2        | VEGF-Rezeptor 2                                          |
