

## ACKNOWLEDGEMENTS

In this part, I would like to name all the people that helped me in several ways to make this work possible right from the beginning to the end.

This thesis would have not been possible without the kind support of Prof. Dr. Brigitte Wittmann-Liebold. Honestly, I should state that her presence in my life is a big gift for me. She had taken so many roles throughout this work and beyond. Her questioning, comments on chapters drafts, her efforts to explain things simply are the rational accelerating encouragement which she had given me, but moreover, in concerts, in family dinners, at tea times with her wonderful friendly family, I believe I have always learned and gained something special. I will always be thankful to her for trusting and supporting me.

I would like to thank Prof. Dr. Volker A. Erdmann for being my advisor and giving bright, clear solutions in my problematic situations concerning about this work and also for reviewing this thesis.

I would like to thank Prof. Dr. Alp Sayar for providing me the opportunity to carry out my Ph.D. study in Chemical Engineering Department in his Engineering Faculty. During my work at Engineering Faculty, I felt like a member of this family so, I would like to thank all Chemical Engineering Department members.

I would like to thank Prof. Dr. Dilek Kazan. She was always with me in this work. Without her efforts this work would not have been started. She helped me as a friend not leaving me when I felt confused in long lab nights. I would like to thank for supporting me in my Ph.D. thesis and sharing my troublesome moments.

I would like to thank Dr. Albrecht Otto (Max-Delbrück Centrum, Berlin-Buch) for teaching me many things about mass spectrometry and for his kind help during my protein analysis. With his wonderful lab experience, problematic samples have been easily studied.

I would like to thank Dr. Christoph Radcke (WITA GmbH, Teltow-Berlin) and Dr. Thomas Pohl (WITA GmbH, Teltow-Berlin) for their kind help at very critical stage,

which was the protein identification step. Their excellent professional experience on protein analysis, but especially mass spectrometry and N-terminal analysis, helped me to get through the confusing data sets and helped me to built the results section. They have contributed this work with their comments at this important stage. I would like to thank WITA GmbH and all my friends working there for always being there for me and constituting many wonderful memories. I am thankful to all my friends in Berlin for forcing me to talk in German and for being tolerant toward my broken German.

I want to mention Dr. Berna Sariyar, Selim Ceylan, Selcuk Ozturk and Serkan Uzyol members of my group at Marmara University. I would like to thank them for their patience at times when I have been really a troublesome person and calm me down giving a cup of coffee. It has been always fun to share the lab and making parties with you. Also, I would like to thank my friend Dr. Kurtul Kucukada for sharing his time with me. The concert, cinema, park tours which we participated together, helped me to cure myself.

I do not really know how I can express my feelings for my family. I would like to give my thanks to all for providing me a confident and loving environment. My sister Yildiz Salman, has been always with me through hard times of typing my thesis, long night stays. She had really hard times while working on my 2-DE gel images but never had given up even though I have become mistreated. Many thanks to my mother Ayla Salman, having amazing sensations, acting on critical times, helping me to focus on my work. I also want to thank my cat Serbet for calming me down in long night writings and watching me carefully during my self-discussing sessions.

And last but not the least, many thanks to my husband, Hasan Dilgimen for being with me, trusting me and showing endurance to my bad temper and tolerance for spoiled months.
