<b>1</b>	<b>Introduction to Conditional Averaging</b>	<b>1</b>
1.1	The System under Consideration . . . . .	2
1.2	The Averaging Principle . . . . .	3
1.3	Breakdown of Averaging Principle . . . . .	5
1.4	Conditional Averaging . . . . .	7
1.5	Related Approaches . . . . .	8
<b>2</b>	<b>Replacing Fast Dynamics by Coupled OU Processes</b>	<b>13</b>
2.1	Guiding Remarks . . . . .	13
2.2	Theory . . . . .	16
2.2.1	Approximation of Fast Dynamics by OU Processes . .	19
2.2.2	Construction of the Transition Rate Matrix . . . .	22
2.2.3	Full Dynamics Approach . . . . .	33
2.2.4	From Dynamics With OU Processes to OU-Averaged Dynamics . . . . .	35
2.2.5	Transition Times Considered in Full State Space . .	40
2.2.6	OU-Averaged Dynamics and Conditional Averaging .	44
2.3	Numerical Experiments . . . . .	48
2.3.1	Design of Appropriate Test System . . . . .	48
2.3.2	Comparison Between Original Dynamics and Dynamics with Fast OU Processes . . . . .	52
2.3.3	Results Including Averaged Dynamics . . . . .	54
<b>3</b>	<b>Multiscale Asymptotics with Disparate Transition Scales</b>	<b>57</b>
3.1	Guiding Remarks . . . . .	57
3.2	Dominant Spectra and Metastability . . . . .	59
3.2.1	Dominant Spectrum of the Generator in $L^2(\mu)$ . .	60
3.3	Summary of Effective Dynamics . . . . .	61
3.3.1	Standard Averaging: $\delta \gg \epsilon$ . . . . .	63
3.3.2	Slow Variable Dynamics Coupled to Metastable Relaxation: $\delta = \text{ord}(\epsilon)$ . . . . .	63
3.3.3	Slow Variable Dynamics Followed by Metastable Relaxation: $\delta \ll \epsilon$ . . . . .	65

---

3.3.4	Interpretation for the Case $\delta = \mathcal{O}(\epsilon)$ . . . . .	67
3.3.5	Arising Problems . . . . .	68
3.4	Multiscale Aymptotics and Averaging . . . . .	70
3.4.1	Standard Averaging . . . . .	70
3.4.2	Strategy under Consideration of Fast Scale Effects . .	71
3.5	Averaged Generator over $\text{ord}(1)$ Time Scale . . . . .	74
3.5.1	Preparatory Work . . . . .	75
3.5.2	Reduced Generator in Explicit Form . . . . .	79
3.5.3	Boundary Terms $\bar{\mathcal{L}}_B$ and $\bar{\mathcal{L}}_E$ Contribute to Higher Order	85
3.5.4	Modeling of Metastable Transitions Induced by $x$ Dynamics . . . . .	94
3.5.5	Summary of Main Results and Outlook . . . . .	97
3.6	Multiscale Asymptotics with $\delta \sim \epsilon$ . . . . .	102
3.7	Multiscale Asymptotics with $\delta \sim \epsilon^2$ . . . . .	107
3.7.1	Final Metastable Relaxation Through Transitions Along Fast Variable Direction: $\tilde{\epsilon} \ll \epsilon$ . . . . .	111
3.7.2	Final Metastable Relaxation Through Transitions along Both Fast and Slow Variable Directions: $\tilde{\epsilon} \sim \epsilon$ . . .	117
3.7.3	Final Metastable Relaxation Through Transitions along Slow Variable Directions: $\tilde{\epsilon} \gg \epsilon$ . . . . .	121
<b>4</b>	<b>Concluding Remarks</b>	<b>123</b>
<b>A</b>	<b>Zusammenfassung</b>	<b>127</b>
<b>B</b>	<b>Averaging with Kurtz's Theorem</b>	<b>129</b>
B.1	Background . . . . .	129
B.2	Reformulation of Kurtz's Theorem . . . . .	130
B.3	Application to SDE with Switching Process . . . . .	135
B.4	Theorem of Kurtz . . . . .	137
<b>C</b>	<b>Transition Times Considered in Full State Space (Sequel)</b>	<b>139</b>
<b>D</b>	<b>Laplace's method</b>	<b>143</b>
<b>E</b>	<b>Second Eigenvector of <math>\mathcal{L}^\epsilon</math>: Illustrative Example</b>	<b>147</b>
<b>F</b>	<b>Completion of Proof in Section 3.7.1: Evaluating <math>\vec{\Omega}</math></b>	<b>149</b>
