

## **Acknowledgements**

This dissertation was conducted at the Center for Lifespan Development of the Max Planck Institute for Human Development, directed by Prof. P. B. Baltes. This dissertation fits in one of the projects at the center, "Cognition and Age", with its principal investigator Dr. S.-C. Li. I am grateful to the Max Planck Society for financing my dissertation through a pre-doctoral stipend.

I wish to express my special gratitude to both of my mentors Dr. S.-C. Li and Prof. P. B. Baltes. Paul B. Baltes has opened my view on cognition and intelligence to include developmental perspectives on individual differences and dynamic aspects of ability structures. Shu-Chen Li has supported this broadening of my scientific perspectives with her impressive capabilities of integrating research on cognition from the fields of development, individual differences, neuroscience, and cognitive modeling. I also would like to further express special thanks to Prof. Dr. R. Schwarzer, Prof. Dr. H. Westmeyer, PD Dr. C. Tesch-Römer, and Dr. J. Eisermann for having agreed to participate in the dissertation committee.

The empirical investigations of this dissertation were conducted using data from the Berlin Aging Study. My special gratitude, therefore, goes to the principal investigators of this study, Paul B. Baltes and Prof. K. U. Mayer, for giving me the opportunity to work with this unique data set. In this context, I also want to express my thankfulness to PD Dr. J. Smith, Prof. U. Lindenberger and Dr. P. Klumb for their help on working with this data set and for many productive discussions.

Of special importance for the smooth progress of my dissertation was my participation in the graduate program "Neuropsychiatry and Psychology of Aging". I am grateful to the Free University, Berlin, and to the Max Planck Institute for Human Development for admitting me to this program. The value of the many opportunities to present and discuss ideas and results during all stages of the

dissertation cannot be overestimated. I would like to express my thanks to all members of the steering committee, especially Jacqui Smith, Paul B. Baltes, Ralf Schwarzer, and Prof. F. Reischies for many helpful comments, and to all participating students for their great collegiality, especially Antje Stange and Michael Rapp who shared the office with me for the time of my dissertation project. For very productive discussions I would also like to thank Ulman Lindenberger, Dr. R. Th. Krampe, Jacqui Smith, Prof. Paul Verhaeghen, Prof. Todd Little, Prof. Lazar Stankov, and Prof. John Horn.

Last but not least, I would like to thank Katja, Clara, Benedikt, and my parents for providing the necessary emotional and social support during the two years while I was working on my dissertation.
