

Acknowledgements

I Thank, with a capital T, Dr. Manfred Gossen for his scientific input and guidance through my Ph.D. experience and allowing me to work in his laboratory. I thank my wife, Dr. Angelika Bonin, for help with the Geneblocs and a variety of scientific and non-scientific issues. The work of this thesis would not have been possible without the generous gifts of GeneBlocs, Lipids and expertise from atugen AG. For these I would like to thank Dr. Klaus Giese, Dr. Anke Klippel and all those at atugen for their support. I would like to thank future Drs. Anand Ranjan, Wei-min Liu, Tina Baldinger, Dr. Mathias Hampf and Dr. Lüdger Hauck for the fun, their insightful recommendations and scientific conversations. I thank my children, Julia and Nicolas, for keeping me grounded. I thank Dr. Mark Heath and Dr. Rene Hen at Columbia University, NYC for resuscitating my scientific career. "10 meecrolitars." I must also thank Dr. William Tappich, University of Nebraska at Omaha, who introduced me to the world of molecular biology, taught me how a pipette works, how to piece together DNA fragments and the importance of weekly lab safety meetings with refreshments.
