

Content

Summary	3
Abbreviations.....	6
1 Introduction	7
1.1 Preface	7
1.2 Lewis Y.....	9
1.2.1 Structure and pathway of the Lewis carbohydrates.....	9
1.2.2 Expression of Lewis Y on normal cells.....	11
1.2.3 Function of Lewis Y.....	12
1.2.4 Lewis Y changes in cancer.....	12
1.2.5 Lewis Y expression and prognosis.....	13
1.2.6 Anti-Lewis Y therapy.....	14
1.2.7 Crystal structures of antibodies with Lewis Y	15
1.3 Technologies.....	16
1.3.1 Antibodies and antibody fragments.....	16
1.3.2 Phage display	18
1.3.3 Anti-idiotypic antibodies and molecular mimicry.....	20
1.3.4 Saturation transfer difference nuclear magnetic resonance	22
2 Results	24
2.1 Specificity ELISA.....	24
2.2 Cloning and sequences of the antibodies	27
2.3 Expression of antibodies and antibody fragments.....	29
2.4 Chain shuffling –looking for new specificities	31
2.5 Antibody purification.....	34
2.6 Epitope mapping of the H type 2 carbohydrate.....	37
2.6.1 STD-NMR on H disaccharide	38
2.6.2 STD-NMR on H type 2.....	39
2.7 Flow cytometry	41
2.8 Immunocytochemistry	44
2.9 Affinity measurements.....	46
2.10 Mimicry between histone H1 and a mixed carbohydrate epitope	48
2.11 Anti-idiotypic antibodies	50
2.11.1 Selection method for mimicry antibodies.....	51
2.11.2 Anti-idiotypic antibodies mimicking Lewis Y or H type 2	55
2.11.3 Generation of Ab3	58
2.12 Adjuvant effect of domain I of phage protein 3.....	60
3 Discussion.....	63
3.1 Lewis Y binding antibodies and specificity	63
3.2 Expression and purification of the antibodies	67
3.3 H type 2 epitope	69
3.4 Detection of Lewis Y on cancer cells	71
3.5 Affinities of the antibodies.....	73
3.6 Mimicry between histone H1 and a mixed carbohydrate epitope	75
3.7 Selection method of anti-idiotypic antibodies.....	77
3.8 Anti-idiotypic mimicry	79
3.9 Adjuvant effect of DI of phage p3	81
3.10 Achievements and outlook.....	83
4 Materials and Methods	85
4.1 General materials	85
4.1.1 Nemod Hybridoma clones.....	85
4.1.2 Antigens	85
4.1.3 Phage.....	85
4.1.4 Bacteria	86
4.1.5 Cell lines	86
4.1.6 Vectors	86

4.1.7	Primers	86
4.1.8	Antibodies and lectin.....	87
4.2	Phage display protocols	88
4.2.1	Phage amplification and precipitation	88
4.2.2	Selections	88
4.2.3	Phage screening.....	89
4.3	Cloning	89
4.3.1	Sequencing.....	89
4.3.2	Cloning of DNA from hybridoma cells.....	90
4.3.3	Construction of DI fusions	90
4.4	Expression of scFvs and antibody purification	91
4.4.1	Production of antibodies.....	91
4.4.2	Purification of antibodies	91
4.4.3	Production and isolation of antibodies from Prolifix supplemented media.....	91
4.4.4	Expression and harvesting of scFv and scFv-DI	92
4.4.5	Purification of scFv and scFv-DI	92
4.5	Antibody characterisation assays	93
4.5.1	ELISA	93
4.5.2	Periodate oxidation.....	93
4.5.3	Western blots.....	93
4.5.4	Surface plasmon resonance	94
4.5.5	Cell staining	94
4.5.6	Flow cytometry	94
4.5.7	Inhibition analysis	95
4.5.8	Saturation transfer difference nuclear magnetic resonance	95
4.6	Immunology assay	96
4.6.1	Mouse immunisation	96
4.6.2	IgG1 and IgG2a antibody immune responses and sera specificity.....	96
