

Matthias Konrad-Schmolke

Insights into Subduction and
Exhumation Mechanisms of Continental
Crust – An Example from the Sesia Zone
(Western Alps)

Dissertation zur Erlangung des Doktorgrades im Fachbereich Geowissenschaften
an der Freien Universität Berlin

Berlin

2006

Promotionskommission:

Prof. Dr. Mark R. Handy, Freie Universität Berlin (Erstgutachter)

Prof. Dr. Roland Oberhänsli, Universität Potsdam (Zweitgutachter)

Prof. Dr. Frank Schilling, Freie Universität Berlin

Prof. Dr. Rainer Kind, Freie Universität Berlin

Dr. Claudio L. Rosenberg, Freie Universität Berlin

Dipl. Geol. Florian Füsseis, Freie Universität Berlin

Datum der Disputation: 27. Januar 2006

TABLE OF CONTENT

CHAPTER 1	1
PREAMBLE	1
1.1 <i>What is the dissertation about?</i>	1
1.2 <i>Structure of the work</i>	1
1.3 <i>Scientific manuscripts</i>	2
1.4 <i>Organisation of the appendix</i>	4
CHAPTER 2	6
2.1 ABSTRACT	6
2.2 ZUSAMMENFASSUNG	9
2.3 INTRODUCTION	14
CHAPTER 3	20
INSIGHT INTO THE PHYSICO-CHEMICAL PROPERTIES OF A SUBDUCTED SLAB FROM GARNET ZONATION PATTERNS (SESIA ZONE, WESTERN ALPS)	20
3.1 ABSTRACT	20
3.2 INTRODUCTION	21
3.3 GEOLOGICAL SETTING	23
3.3.1 <i>Lithotectonic subdivisions</i>	24
3.3.2 <i>Structural framework</i>	26
3.4 RESULTS	27
3.4.1 <i>Sample locations and garnet zonation patterns</i>	27
3.4.2 <i>Spatial distribution of the different zonation patterns</i>	28
3.4.3 <i>Comparison of modelled and observed zonation patterns</i>	29
3.4.3.1 Sample MK 35 (group I garnets)	30
3.4.3.2 Sample MK 117 (group II and III garnets)	31
3.4.3.3 Sample MK 163 (group III garnets)	34
3.4.3.4 Thermodynamic forward modelling	35
3.4.3.5 MK 35 (group I garnets)	37
3.4.3.6 MK 117 (group II garnets)	42
3.4.3.7 MK 117 (group III)	47
3.4.3.8 MK 163 (group III garnets)	48
3.5 DISCUSSION	51
3.5.1 <i>P-T path information</i>	51
3.5.2 <i>Water under-saturation</i>	53

3.5.3	<i>Relaxation of the growth zonation due to volume diffusion</i>	55
3.5.4	<i>Regional implications</i>	56
3.6	CONCLUSIONS	57
3.7	ACKNOWLEDGEMENTS	58
CHAPTER 4		59
	KINEMATICS AND MECHANISMS OF EXHUMING SUBDUCTED CONTINENTAL CRUST IN THE SESIA ZONE, WESTERN ALPS	59
4.1	ABSTRACT	59
4.2	INTRODUCTION	60
4.2.1	<i>Primary lithotectonic features in the Sesia Zone</i>	64
4.3	RESULTS	68
4.3.1	<i>The structural-mineralogical record of exhumation</i>	68
4.3.1.1	Distinguishing deformational phases and fabric domains	68
4.3.1.2	Pre-Alpine fabrics	72
4.3.1.3	Fabrics in domain 1 - subduction	73
4.3.1.4	Fabric domain 2 – transpressional exhumation	73
4.3.1.5	Fabric domain 3 –extensional exhumation	76
4.3.1.6	Fabric domain 4 – the Gressoney shear zone	77
4.3.1.7	Fabric domain 5 –the Periadriatic shear zone	78
4.3.1.8	The Sesia-Ivrea contact	79
4.3.2	<i>Pressure-temperature-time evolution of HP rocks in the Sesia Zone</i>	81
4.3.3	<i>A kinematic model for exhuming HP rocks</i>	86
4.3.3.1	Original orientation of subduction and exhumation structures	86
4.3.3.2	From rifting to subduction and early exhumation	87
4.3.3.3	Transpressional exhumation	90
4.3.3.4	Pre-collisional extensional exhumation	91
4.3.3.5	Collisional exhumation	92
4.4	DISCUSSION OF EXHUMATION MECHANISMS	92
4.5	CONCLUSIONS	95
4.6	ACKNOWLEDGEMENTS	98
CHAPTER 5		99
	VOLATILES, MINERAL STABILITIES AND THEIR EFFECT ON THE FORCES DRIVING EXHUMATION OF SUBDUCTED CONTINENTAL CRUST IN THE SESIA ZONE (WESTERN ALPS)	99
5.1	ABSTRACT	99

5.2	INTRODUCTION	100
5.3	GEOLOGICAL SETTING	103
5.3.1	<i>Lithotectonic subunits</i>	104
5.3.2	<i>Fabric domains</i>	106
5.4	RESULTS OF THERMOBAROMETRY AND THERMODYNAMIC MODELLING	108
5.4.1	<i>Approach and assumptions</i>	108
5.4.2	<i>Conditions during transpressional exhumation (fabric domains 1 and 2)</i>	109
5.4.3	<i>Conditions during extensional exhumation (fabric domain 3)</i>	115
5.5	DISCUSSION	119
5.5.1	<i>Interpretation of forward thermodynamic modelling in terms of a P-T path</i>	119
5.5.2	<i>The role of buoyancy in driving exhumation</i>	120
5.6	CONCLUSIONS	127
5.7	ACKNOWLEDGEMENTS	128
CHAPTER 6		129
THERMODYNAMIC MODELLING OF DIFFUSION-CONTROLLED GARNET GROWTH		129
6.1	ABSTRACT	129
6.2	INTRODUCTION	130
6.2.1	<i>Thermodynamic modelling of compositional zonation patterns</i>	131
6.2.2	<i>Implications for transport-controlled garnet growth</i>	133
6.2.3	<i>Modelling of transport-controlled garnet growth</i>	134
6.3	RESULTS	135
6.3.1	<i>Homogeneous and fractional equilibrium crystallisation</i>	138
6.3.2	<i>Fractional disequilibrium crystallisation</i>	139
6.3.2.1	Disequilibrium incorporation of manganese	139
6.3.2.2	Disequilibrium incorporation of calcium	141
6.3.2.3	Disequilibrium incorporation of aluminium	142
6.3.3	<i>Examples from natural rocks</i>	144
6.4	DISCUSSION	146
6.4.1	<i>Zonation patterns indicative of diffusion-controlled garnet growth</i>	147
6.4.2	<i>Growth interruptions due to limited nutrient supply</i>	148

6.4.3	<i>Possible misinterpretation due to non-centre cutting planes</i>	150
6.4.4	<i>Evidence for small-scale chemical variations in metamorphic rocks</i>	151
6.5	CONCLUSIONS	152
6.6	ACKNOWLEDGEMENTS	152
CHAPTER 7		154
7.1	SUMMARY AND OUTLOOK	154
7.1.1	<i>Structural difference and similarity between the SEZ and other high- and ultra-high-pressure terranes</i>	154
7.1.2	<i>The role of the slab volume during the subduction and exhumation process</i>	155
7.1.3	<i>Thermo-mechanical models</i>	156
7.1.4	<i>Thermodynamic forward modelling</i>	157
7.1.5	<i>The effect of the water content of subducted rocks</i>	158
CHAPTER 8		160
	REFERENCES	160
APPENDIX		182
A 1	<i>Sample description, sample locations and main foliation</i>	182
A 2	<i>Analytical procedure</i>	188
A 3	<i>Appendix for Chapter 3</i>	191
A 4	<i>Appendix for Chapter 4</i>	191
A 4.1	Historical terminology	191
A 4.2	Appendix geochronology	192
A 5	<i>Appendix for Chapter 5</i>	195
A 5.1	Rheological models of the upper plate lithosphere (Fig. 5.15)	195
A 5.2	References for creep parameters	196
A 5.3	Solid solution endmembers and Margules Parameters	196
A 6	<i>Appendix for Chapter 6</i>	198
A 6.1	Calculation routine	198
A 6.2	Calculation procedure for diffusion controlled garnet growth	199
A 6.3	Solid solution endmembers and Margules Parameters	200
