

## Acknowledgments

First and foremost I would like to thank Prof. David Garbers for the support and guidance he has generously provided during the last years. I am also very grateful for the opportunity to teach at the MBL Physiology course directed by him.

I would like to express my thanks and appreciation to Prof. Volker Erdmann for his support and for acting as my thesis advisor and reviewer at Freie Universität Berlin.

I am particularly grateful to Dr. Kent Hamra for his discussions with me, ideas, advice, and collaboration in planning and performing the experiments.

I would also like to thank Karen Chapman, Sara Love Swaney, Sandy Rahberg, Sasha Tindle, Elizabeth Hinnant, and Dana Grellhesl for technical assistance, Dr. James Richardson for assistance with *in situ* hybridization, Dennis Bellotto for assistance with electron microscopy, and Dr. Daniel Garry and Tim Macatee for assistance with FACS. I appreciate the assistance I received from the UTSWMC Microarray Facility, especially from Windy Allman, Minning Wu, and Robert Powell. I also want to thank Jennifer Cronkhite for her help and for contributing the GCS-GFP rat. MSC-1 Sertoli cells were a gift from Michael Griswold, and SNL 76/7 STO fibroblasts were a gift from Allan Bradley.

I am especially grateful for the support and advice that I have received from Drs. Sally Comerford, Robert Hammer, and Sharon Milgram. I also want to thank Janette Tubb for help with all administrative matters, and all members of David Garbers' laboratory and the Green Center for their support.

This research was supported by the Howard Hughes Medical Institute, the Cecil H. & Ida Green Center for Reproductive Biology Sciences, and grant HD 36022 from the National Institutes of Health.

I would also like to thank the Department of Biology, Chemistry and Pharmacy at Freie Universität Berlin for permission to conduct my thesis work in David Garbers' laboratory.
