

## Acknowledgements

I am deeply grateful to Prof. Dr. K.-H. Rieder for providing an opportunity to work in his group and for his support during my PhD work and to Prof. Dr. K. Horn for being a second referee of my thesis.

My special thanks go to Dr. Kai-Felix Braun for supervising my PhD work, for his attention and patience guiding my work from very beginning till writing this manuscript. Without his help and support this work would not be completed in a way it is.

I am thankful to Prof. Dr. Philip Hofmann for a great help with the Ga(010) experiment. Also I would want to thank Prof. Dr. Jose Ignacio Pascual and Prof. Dr. Saw-Wai Hla for their kind attention and useful scientific discussions during my PhD work.

I appreciate the colleagues from Prof. Rieder`s group for a nice working environment, especially my office neighbours, Micol Alemani and Zoltan Juhas for warm friendly atmosphere in our office.

Finally I want to say thank you to my parents for their believe in me and to all my friends, especially Julia Pushkar and Nadya Maximova for their continous support and making me feeling nice.
