Analysis of geomagnetic variations in the Central and Southern Andes

---

Dissertation
zur Erlangung des Doktorgrades
im Fachbereich Geowissenschaften
an der Freien Universität Berlin

Wolfgang Soyer
Berlin, 2002

Erster Gutachter:	Prof. Dr. V. Haak
Zweiter Gutachter:	Prof. Dr. H.-J. Götze
Tag der Disputation:	22.05.2002

Contents

1 Introduction **5**

2 Methodical fundamentals **9**
2.1 The physical model 10
2.2 Calculation of transfer functions 11
2.3 Analysis of transfer function tensors 13

3 On the study areas **19**
3.1 The Central Andes 19
3.2 The Southern Andes 29

4 Field data analysis **33**
4.1 Processing techniques 33
4.2 Application to the data sets 35
4.3 Combination of processed arrays 39

5 Presentation of the processed data **41**
5.1 Central Andes 41
5.2 Southern Andes 51

6 2-D Inversion of inter-station transfer functions **55**
6.1 General considerations 55
6.1.1 ... on the amount of information 55
6.1.2 ... on the uniqueness of inversion solutions 56
6.2 The inversion scheme of the employed program 57
6.3 Calculation of sensitivities 59
6.4 Synthetic examples 61
6.4.1 Model from Siripunvaraporn & Egbert 62
6.4.2 A very crude ANCORP resistivity model 64
6.4.3 Inversion of data with various references 66

7 Isotropic 2-D modelling **71**
7.1 The ocean effect 71
7.2 On the sensitivity and accuracy of the two polarizations 72
7.3 Central Andes 74
7.4 Southern Andes 82

8 Anisotropic 2-D modelling of magnetic data from the Southern Andes **89**

9 Discussion and conclusions **97**

10 Summary **105**

Acknowledgements **107**

Bibliography **109**

Appendix

A Calculation of forward responses in REBOCC 119
A.1 Solution of the induction problem 119
A.2 Calculation of field components 121
B Data and joint inversion responses 123
C Station runtimes 129
D Analysis of an instrumental test recording 132
