Technology development for genotyping single nucleotide polymorphisms

Inaugural-Dissertation

zur

Erlangung des Doktorgrades am

Fachbereich Biologie, Chemie, Pharmazie

der Freien Universität Berlin

vorgelegt von

Sascha Sauer

aus Osnabrück, Deutschland.

Berlin

2001

Diese Arbeit wurde am Max-Planck-Institut für molekulare Genetik (Berlin, Deutschland) und am Centre National de Génotypage (Evry, Frankreich) in der Zeit von Dezember 1998 bis November 2001 in der Arbeitsgruppe von Dr. Ivo G. Gut durchgeführt. Der Verfasser versichert, die Arbeit eigenständig durchgeführt und alle Hilfsmittel angegeben zu haben.

1. Gutachter: Prof. Dr. Hans Lehrach

2. Gutachter: Prof. Dr. Volker A. Erdmann

Ort und Tag der Disputation: Berlin, 07.06.2002

Table of Contents

INTRODUCTION 2

Single nucleotide polymorphisms (SNPs) 2
Techniques for large-scale SNP genotyping 4
SNP genotyping by DNA sequencing 5
SNP genotyping by microarrays 8
The TaqMan assay, "Molecular Beacons" and Kinetic PCR 12
The Invader assay 15
Introduction to MALDI-MS 17
DNA sequencing for SNP genotyping by MALDI-MS 19
Direct mass-analysis of PCR products by MALDI-MS 20
Primer Extension and MALDI-MS 20
Nucleic acid hybridisation and mass spectrometry 22
Invader assay by MALDI-MS 24
Problems of (UV-) MALDI-MS analysis 24
Objectives of this thesis 27

MATERIALS AND METHODS 28

Materials 28
Standard procedures 29
Preparation of bovine DNA 30
Preparation of human DNA 30
DNA sequencing for confirmation of results of the GOOD assay 30
Oligonucleotide synthesis with amino-modified nucleobases 31
Positive charge-tagging of oligonucleotides containing amino-modified primers 32
Standard GOOD assay protocol for positive ion mode MALDI-MS detection 33
Standard GOOD assay for negative ion mode MALDI-MS detection and the GOOD assay by switching the ion mode 36
MALDI analysis of synthetic DNA oligomers 38
The simplified GOOD assay 39
Software used for the analysis of results of the GOOD assay 42
LCR on artificial templates 44
Exonuclease digestion 46
Expression and purification of Methanococcus jannaschii Flap Endonuclease 47

FEN REACTION ON A SYNTHETIC TEMPLATE 48
FEN REACTION ON A PCR PRODUCT 49

RESULTS 50

EXPLANATORY REMARKS 50
OVERVIEW OF THE STANDARD GOOD ASSAY 50
APPLICATIONS OF THE GOOD ASSAY IN THE POSITIVE ION MODE VERSION 54
APPLICATIONS OF THE GOOD ASSAY IN THE NEGATIVE ION MODE VERSION 60
AUTOMATION OF THE STANDARD GOOD ASSAY 63
FURTHER DETAILS ABOUT THE GOOD ASSAY 64
NOVEL INSIGHTS CONCERNING DNA CHARGE-TAGGING 70
THE SIMPLIFIED GOOD ASSAY 72
APPLICATIONS OF THE SIMPLIFIED GOOD ASSAY 75
LIGATION OF DNA BACKBONE MODIFIED OLIGONUCLEOTIDES 81
THE FEN-GOOD APPROACH 87

DISCUSSION 92

THE STANDARD GOOD ASSAY 92
MASS SPECTROMETRIC ASPECTS OF THE GOOD ASSAY 98
THE SIMPLIFIED GOOD ASSAY 100
COMPARISON OF THREE DIFFERENT ENZYMATIC ALLELE-DIFFERENTIATION METHODS 102
AUTOMATION OF THE STANDARD GOOD ASSAY 105
ARE THE GOOD ASSAYS ECONOMICAL ENOUGH FOR LARGE-SCALE SNP GENOTYPING? 107
