

Figure 10-1: Phylogram of Boraginaceae, Cordiaceae, and Heliotropiaceae. Cordiaceae, and Ehretiaceae constitute the Primarily Woody Boraginaceae. *Auxemma*, *Patagonula*, and *Saccellium* are included in *Cordia* (*Sebestena* subclade). *Carmona*, *Rotula*, and possibly also *Cortesia* are included in *Ehretia*. The systematic position of *Codon* and *Wellstedia* remains uncertain. *Hydrolea* and *Pteleocarpa* do not belong to Boraginaceae. Ma: Million years; NW: New World; OW: Old World.
