

Single molecule mechanics and the myosin family of molecular motors

Dissertation zur Erlangung des akademischen Grades des
Doktors der Naturwissenschaften (Dr. rer. nat.)

eingereicht im Fachbereich Biologie, Chemie,
Pharmazie der Freien Universität Berlin

vorgelegt von

Dipl. Chem. Zeynep Ökten
aus Berlin

Oktober, 2005

Betreuer und erster Gutachter

JAMES A. SPUDICH, PH.D.

Department of Biochemistry,
Stanford University

Betreuer und zweiter Gutachter

PROF. DR. WOLFRAM SÄNGER

Fachbereich Biologie, Chemie,
Pharmazie der Freien Universität Berlin

Disputation am

13. Dezember 2005

Die vorliegende Arbeit wurde im Zeitraum von Januar 2001 bis Dezember 2004 an der Stanford Universität, in Stanford (USA) unter der Betreuung durch James A. Spudich, Ph.D. und Prof. Dr. Wolfram Sängler angefertigt. Zeynep Ökten wurde durch Boehringer Ingelheim Fonds gefördert. Die Arbeit wurde unterstützt durch US National Institutes of Health Grant GM33289 für James A. Spudich, Ph.D.

ACKNOWLEDGMENTS

As any scientific project, my graduate thesis project developed from intellectual contributions, assistance and encouragement from countless distinguished mentors and colleagues. I am indebted to everybody whose help and patience made this thesis project possible.

First and foremost, I would like to thank my advisors James A. Spudich, Ph.D. and Prof. Dr. Wolfram Sanger whose generous support was essential for the success of this work. I am truly grateful to Prof. Dr. Wolfram Sanger who accepted me as an 'external' graduate student and gave me the opportunity to carry out my thesis abroad. His support and understanding are very much appreciated. I am particularly thankful for his support and assistance in completing my thesis manuscript as well as the research paper manuscripts.

I thank my advisor James A. Spudich for giving me the opportunity to work in his research group and for his invaluable scientific and moral support. His guidance, intellectual contributions and patience were critical for my development as a scientist. I am especially thankful for his encouragements which enabled me to face and answer challenging problems in the field.

The support of the Spudich lab members was critical for the success of this work and I owe a lot of my scientific training in biochemistry and molecular biology to the past and present members of the Spudich 'superfamily'. Overall it truly has been a pleasure to work with distinct scientists in the biochemistry department for over four years.

Fortunately for me, I also enjoyed the support of my diploma thesis advisor Prof. Dr. Mathias O. Senge throughout my graduate studies. His approach to encourage his students to assume the responsibility of conducting independent research early on was critical for my growth as a scientist.

Finally, but not least, I want to thank my husband Felix Muller-Planitz. This all would have not been possible without his scientific and emotional support. His infinite patience, understanding and support grew to be the most significant aspect of my life over the past years.

Zum Andenken an meine
geliebten Großeltern
Idiye Ökten und Raif Ökten
