

Table of contents

I. Summary	6
II. Zusammenfassung	8
III. Resumen	10
IV. Introduction	14
1. Locomotion of early mammals	14
2. <i>Henkelotherium guimarotae</i>	15
3. Comparison with Recent species and locomotor types	17
4. Relevance of small body size and habitat for locomotion	18
5. Characters decisive for the locomotion of small mammals	18
6. <i>Monodelphis domestica</i>	20
7. History of the discovery of <i>Henkelotherium</i>	21
V. Definitions	23
VI. Material and Methods	27
1. Morphological comparisons and osteometry	29
2. Muscular dissections	30
3. Cineradiographic analysis and reconstruction	31
4. Abbreviations	32
VII. Results	35
I. Morphological Comparisons and Osteometry	
1. Vertebral column except tail	35
2. Reconstruction of the cervical and thoracic segments of the vertebral column in <i>Henkelotherium</i>	39
3. Reconstruction of the body length of <i>Henkelotherium</i>	41

4. Head-body-length	41
5. Comparison of the body length of <i>Henkelotherium</i> with those of Recent species	42
6. Proportions of the vertebral column except tail	43
7. Tail	54
8. Limb proportions	58
8.1. Fore limb proportions	60
8.2. Hind limb proportions	68
9. Morphology of the fore limb	76
10. Morphology of the hind limb	79
11. Morphology of autopodium	81
II. Muscular Dissections	82
III. Cineradiographic Analysis and Reconstruction	87
Revised reconstruction of <i>Henkelotherium</i>	88
VIII. Discussion	94
Skeletal characters and eco-morphological considerations	
1. Vertebral column except tail	94
2. Tail	99
3. Limb proportions	102
4. Morphology of the fore limb	103
4.1 Elbow joint	104
5. Morphology of the hind limb	106
6. Autopodium	108
7. Epipubic bones	110
IX. Conclusions – Implications for Locomotion	112

X. References	117
XI. Acknowledgements	126
Curriculum Vitae – Lebenslauf	129
